CREATING LOCAL, MICROSOFT, AND DOMAIN ACCOUNTS

- Local accounts: created directly on the device; managed via Settings > Accounts > Family & other users or Control Panel
- Microsoft accounts: linked to cloud services; created via Settings or during Windows setup
- Domain accounts: managed by IT admins via Active Directory; used in enterprise environments

MANAGING USER ACCOUNTS

- Modify account types (Standard vs Administrator)
- Use Computer Management for local accounts
- Group Policy for domain accounts
- Account policies: password complexity, expiration, lockout policies

SECURING THE SIGN-IN PROCESS

- Enable Windows Hello (PIN, fingerprint, facial recognition)
- Configure BitLocker for drive encryption
- Use Credential Guard and Secure Boot
- Enforce MFA for Microsoft and domain accounts

SIGNING OUT, SWITCHING, AND LOCKING

- Use Ctrl+Alt+Del for quick access to sign-out/lock options
- Fast User Switching via Start Menu
- Lock workstation with Win+L
- Configure automatic lock via Group Policy

SHARING YOUR PC WITH OTHER USERS

- Add users via Settings > Accounts > Family & other users
- Assign appropriate permissions
- Use guest accounts for temporary access
- Monitor usage with Event Viewer

ACCESS CONTROL IN WINDOWS 11

- NTFS permissions: Full Control, Modify, Read & Execute
- Share permissions vs NTFS permissions
- Use ACLs (Access Control Lists) for granular control
- Tools: icacls, File Explorer, PowerShell

ADVANCED ACCESS CONTROL TECHNIQUES

- Configure auditing via Local Security Policy

- Use Group Policy to enforce access rules

- Implement Role-Based Access Control (RBAC)

- Use AppLocker to restrict application usage

SECURITY BEST PRACTICES FOR IT TECHNICIANS

- Regularly update Windows and drivers
- Use antivirus and endpoint protection
- Monitor logs and alerts
- Educate users on phishing and social engineering

TROUBLESHOOTING USER ACCOUNT ISSUES

- Use Event Viewer for login failures
- Reset passwords via lusrmgr.msc or ADUC
- Repair corrupted profiles
- Use Safe Mode for recovery
